CSIT321 - PROJECT

FYP-26-S3 First Lecture

Prem

Assessor

Prem@uow.edu.au; Premrajan_p@yahoo.com

4th July 2026

CSIT321 – Project, 1nd FYP briefing

- **What is FYP?**
- Objective
- Learning Outcomes
- Assessment & deliverables
- Who is who
- Role of a project supervisor
- Expectation from the project team
- Important time-line

What is Final Year Project (FYP)?

A capstone project for students in Computer Science and Information Technology that aims to provide them with: practical experience in complete systems development.

It is **not** the same as your subject assignments.

It is a 12 credit points subject.

Duration

- The project is to be undertaken in two sessions in the final year of the course.
- Session-1, 4th July– 19th Sept 2026
- Session-2, 20th Sept -21st Nov 2026

The challenge

- The independence of the work and the requirement for **originality** of the project.

CSIT321 – Project, 1nd FYP briefing

- What is FYP?
- **Objectives**
- Learning Outcomes
- Assessment & deliverables
- Who is who
- Role of a project supervisor
- Expectation from the project team
- Important time-line

Objectives:

- Expose to real world working environment.
- Develop your ability to work on a large project in a group.
- The project connect groups of students with supervisors and clients that are facing an ICT-base problem.

Project Groups

Subject outline

Objectives:

- The students are required to **find** **innovative** and **creative** solutions for the problem. This will involve:
  - Research - proposed application domain,
  - Requirement Gathering,
  - Design,
  - Implementation,
  - Documentation,
  - Quality Control, and
  - Project Management aspects
  - Group coordination
  - Seminars and individual presentations

CSIT321 – Project, 1nd FYP briefing

- What is FYP?
- Objective
- **Learning Outcomes**
- Assessment & deliverables
- Who is who
- Role of a project supervisor
- Expectation from the project team
- Important time-line

Subject Learning Outcomes

- Through careful and in-depth researches, you should be able to define, design, program and document an industry-related ICT project.
- Communicate effectively with supervisors, clients, users and other stakeholders.
- Describe and carry out processes involved in planning, project management, Design and Cost benefit and needs analysis.
- Employ problem solving skills in small groups. Use appropriate graphical methods to describe your system adequately.
- Consolidate, synthesise knowledge and apply factors that need to be considered in complete systems design.

Subject Learning Outcomes

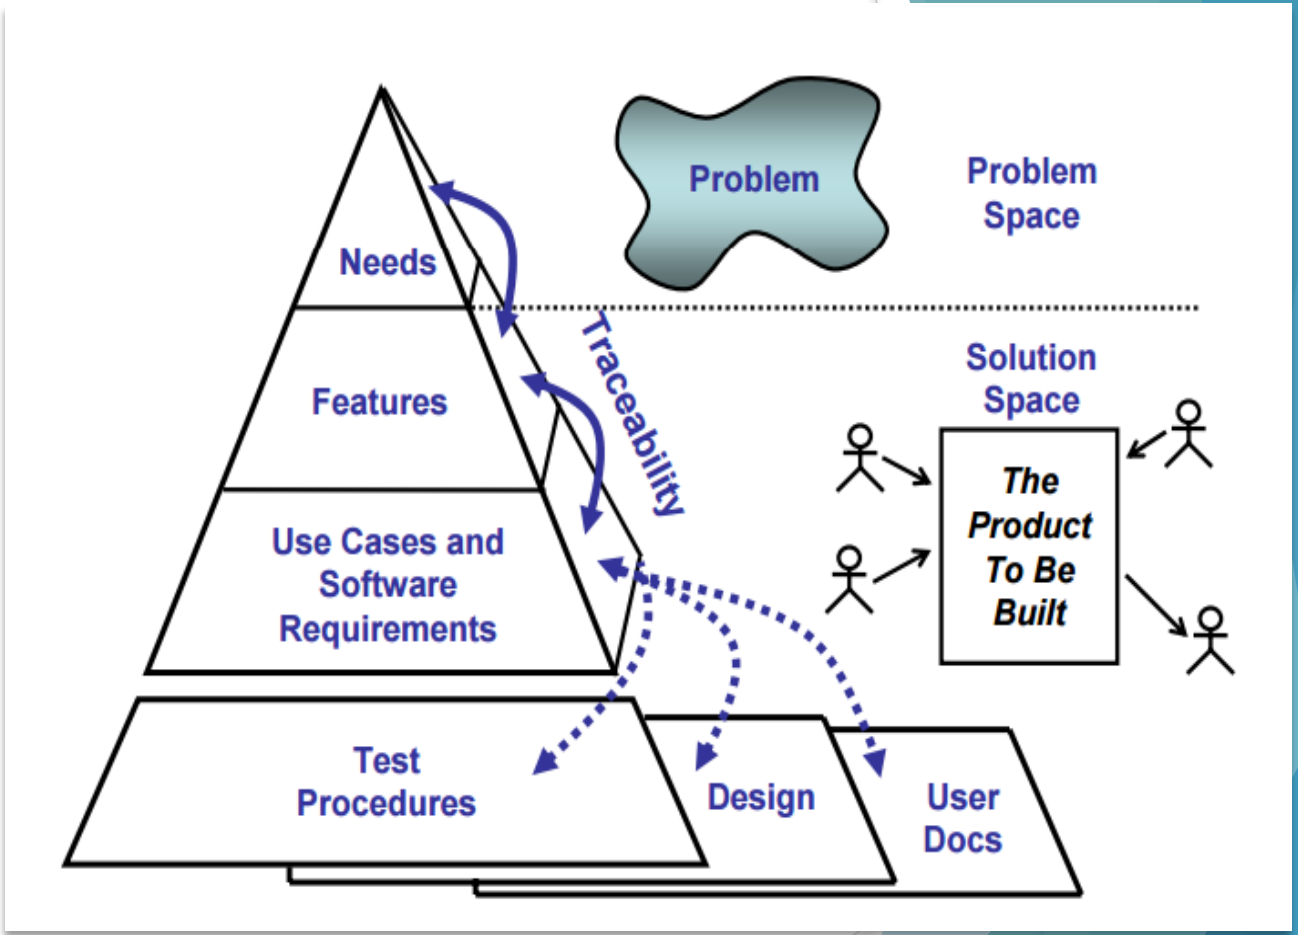

- Use **relevant design and evaluation methods** and detailed planning for the maintenance of the designed system.
- Apply a **professional and ethical approach** to decision making and related social responsibilities in IT and software project.

What are the expectations?

- The team is expected to **develop a product** and **NOT** just a program.
- **Completeness** of Product functionalities based on the requirement specification submitted; i.e., **conformance** to **explicit or implicit requirements** and **expectations**.
- Design and Develop the Product
- Carry out module level and Integrated tests
- *Higher grades can be awarded based on its market readiness.*

Manage Requirements

- Carry out Domain Research
- Aanalyze the Problem
- Understand User Needs
- Define the System
- Decide the business model
- Manage Scope
- Refine the System Definition
- Model the system
- Build the Right System
- Test and Validate

http://www.nyu.edu/classes/jcf/CSCI-GA.2440-001/slides/session1/SoftwareEngineeringFundamentals.pdf

Topic and Project Plan

CSIT 26-S3-26 Developing recommendation app for diet and nutrition

Project Description:

The aim of this project is to design and develop a mobile application that supports users in managing their diet and nutrition. As part of the project, students are required to conduct both market research and a literature review to investigate existing nutrition and dietary recommendation applications, as well as the recommendation techniques and features they provide. The findings from this research will be used to inform the design and development of a personalized dietary recommendation mobile application.

The application should help users establish healthy eating habits, monitor their nutritional intake, and track their progress over time. At a minimum, the application should provide the following core functionalities:

- Allow users to set a daily calorie intake goal.
- Generate personalized meal recommendations based on the user's calorie target and allow users to record the calories consumed for each meal.
- Integrate with an online recipe API to retrieve recipe information for recommended meals.
- Allow users to create and manage their own recipes.
- Maintain a food diary and generate daily and monthly calorie intake reports to help users monitor their dietary progress.
-

The application should also provide profile-based services by personalizing recommendations according to user information, such as dietary preferences, goals, or other relevant characteristics.
The product must empower users to make data-driven decisions based on their profile, the activities they carry out and the calories they consumed.
In addition, the proposed business model should support multiple categories of users while providing appropriate services for each user type.

The application must have features to profile the users, Intelligent content delivery with context aware recommendations, Incentive based motivation mechanism with gamification to facilitate social interaction, Analytics- including Progress tracking, predictive analytics etc.

As an advanced feature, the application may incorporate image recognition technology to identify meals from photographs taken by users and automatically estimate their calorie content, further enhancing the user experience and simplifying meal tracking.

The project may consider releasing the application *to the app store*."

The Research

What to Look for ?

Do in-depth research and analysis (qualitative or quantitative) on similar product and identify key features (functional, non-functional, interface, as well as the scope, Targeted users, Business Model etc.)

Important: Need to provide evidence of your researches and analysis. (Refer to the Grade Descriptors described at the end of the Subject Outline.)

Research Summary

Product Comparison						
Functions/ Features	**MyFitnessPal**	**Lose It!**	**Noom**	**MacroFactor**	**EatWise**	**Our App**
Custom Goals	Yes	Yes	Not Exactly	Yes	Yes	Yes
Generate Meal Recommendations	Yes	No	No	No	Yes	Yes
Dynamic Calories Tracker	Yes	Yes	Yes	Yes	Yes	Yes
Search Recipes	Yes	Yes	Yes	Yes	Yes	Yes
Recipe Database (Create, Insert, Save)	No	No	Not Exactly	Yes	No	Yes
Inserted Recipes with nutritional details professionally validated	Yes	No	No	No	No	Yes
Daily/Monthly Calories Intake Report	Yes	No	Yes	Yes	No	Yes
User Diary	Yes	No	Yes	Yes	Yes	Yes
Cross Platform (IOS and Android)	Yes	Yes	Yes	Yes	Yes	Yes
Progress Tracker (Weight)	Yes	Yes	Yes	Yes	Yes	Yes
Macro Tracker	Yes	Yes	Not Exactly	Yes	Yes	Yes
Exercise Tracker	Yes	Yes	Yes	Yes	No	No
User Profile	Yes	Yes	Yes	Yes	No	Yes
Food Image Recognition	Yes	Yes	No	Not Exactly	Yes	Yes
Community and Social Groups in App	Yes	Yes	No	No	No	No
Integration with Health apps	Yes	Yes	Yes	Yes	Yes	No
Customised Diet Plan	Yes	No	Yes	Yes	Yes	Yes
Connectivity with fitness watch	Yes	Yes	Yes	No	No	No
Daily tidbits	No	No	Yes	No	No	Yes
Meal Reminder/Fasting Reminder	Yes	Yes	No	Yes	Yes	Yes
AI Chatbot	No	No	No	No	Yes	No
Barcode Scanner	Yes	Yes	No	Yes	Yes	Yes
Habit tracking for logging streaks	No	Yes	Yes	Yes	No	Yes
FAQ	Yes	Yes	Yes	Yes	Yes	Yes
NF1						Yes
NF2						Yes

Final Product

https://drive.google.com/drive/folders/1nNoK1QB2O7xQ7BSIOa5bUeZTNVDTKeqc

Describe your system Graphically

SRS

TDM

http://www.nyu.edu/classes/jcf/CSCI-GA.2440-001/slides/session1/SoftwareEngineeringFundamentals.pdf

PRD (Project Requirement Documentation)

Documents

- A requirements specification is required for the project. This is your opportunity to clearly specify, in agreement, with your supervisor, the:
  - Base requirements of the project (Minimum requirements)
  - Additional requirements which are considered “nice to have’s”.
  - Stretch goals.

  - Due on 2nd August 2026 Submission in Moodle

Deliverables- PRD

- A typical project requirement includes:
  - A purpose
  - An overall description
  - Research Summary
  - Specific requirements
    - Functional requirements
    - Non-functional requirements
    - Other requirements
      - System features
      - Business Model
      - Development Tools and Methodologies used
      - Regulation such as PDPA, etc.

- Work Breakdown Structure
- Wireframes
- Roles & Responsibilities
- Project Schedule Gantt Chart

https://drive.google.com/drive/folders/1zfW7sqPEBaDuKGKd88_s8wUgsQUBKcvP

Further Submissions

User Requirement Specification (URS/SRS)

Further Study the various User requirements and refined the functionalities

Include Use case diagrams and other tools to adequately describe the System requirements

Submit to Supervisor - based on date given by Supervisor

Tentative Submission Date: 15 August 2026

Further Submissions

Technical Design Manual (TDM)

Create Design Specifications, System Architecture, Database Design, Class and Entity Diagrams to describe the design phase of the project

Create wireframes for the entire Product.

UI (interface) design ideas created in a tool such as Axure RP, Adobe XD, Sketch, Figma, Mockflow etc.

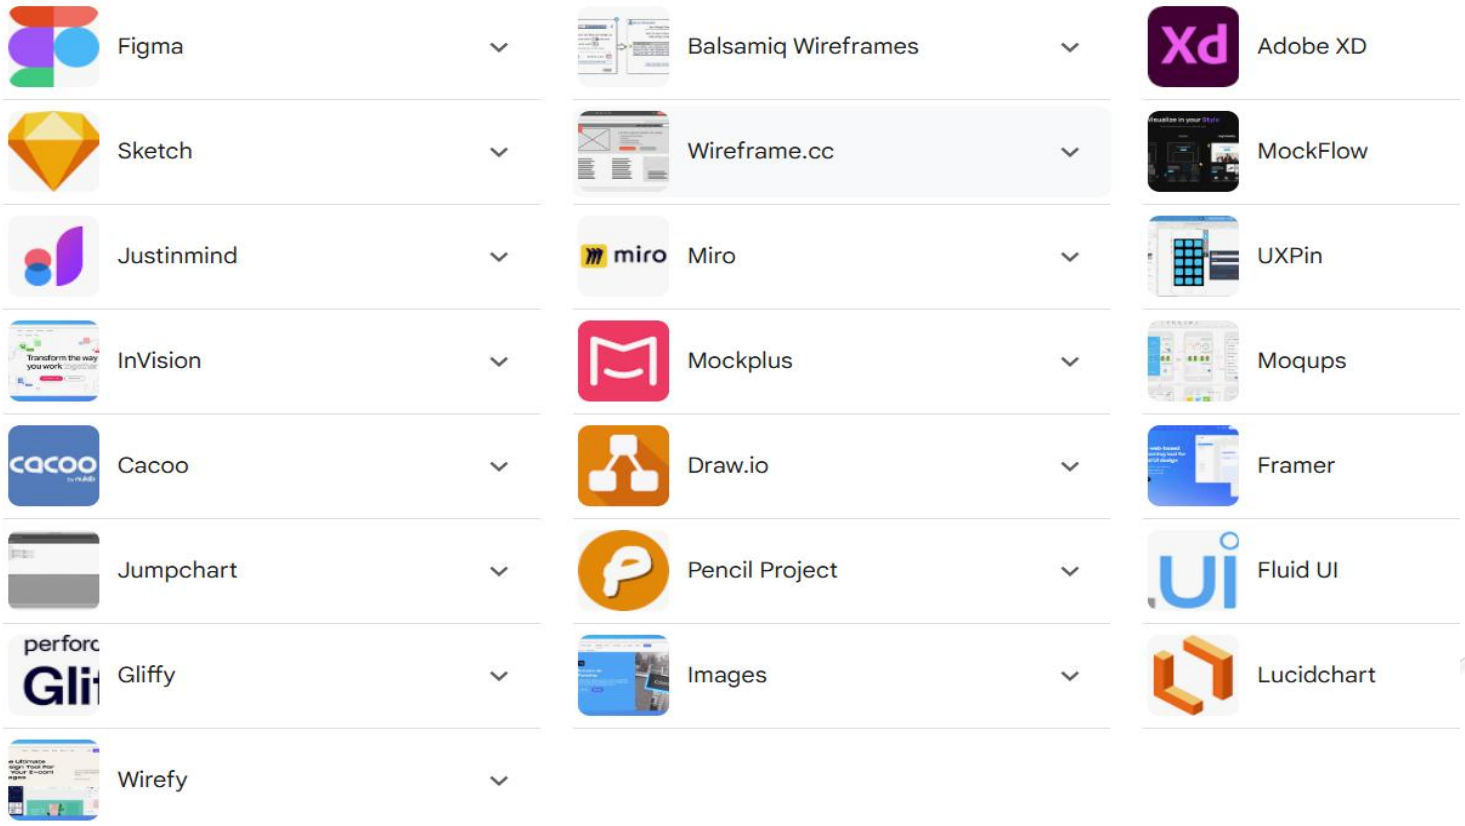

Submit to Supervisor - based on date given by Supervisor

Tentative Submission Date: 1st Sept 2026

Further Submissions

Technical Design Manual

Wireframe Tools

Reflective Diary

Individual reflective diary

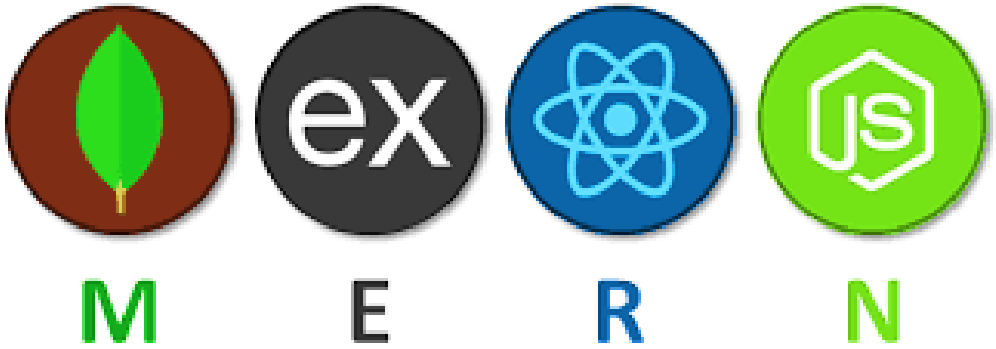

Individual reflective diaries need to record your own (individual) activities. These entries must be completed and submitted to supervisor on a weekly basis.

How to do that?

- In your diary, record your personal lessons learned, opportunities, as well as risks that you encounter, new ideas, questions, and thoughts concerning the current project and your execution.
- Use this diary to record areas where you excel as well as areas where you need improvement.

Submit to Supervisor weekly Starting from 11 July and Consolidated Individual Diary Submission in Moodle 14 Nov 2026

Development Tools (Example)

MERN Stack Components

The MERN stack is a collection of JavaScript-based technologies that are used together to develop web applications. The stack consists of MongoDB, Express, React, and Node.js.

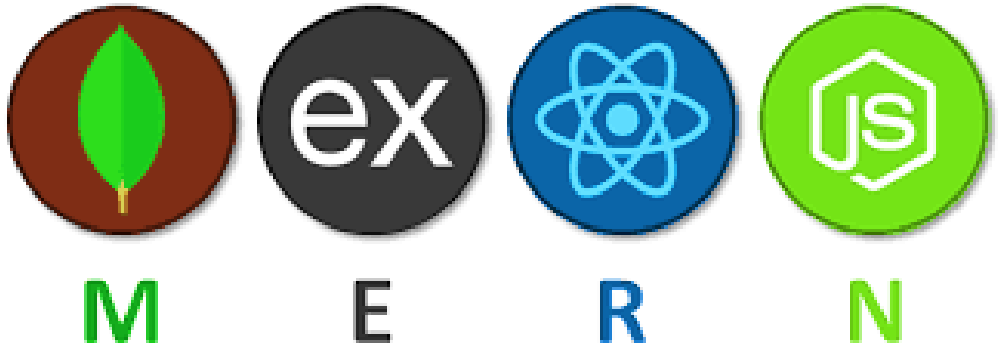

•MongoDB is a highly scalable document database that makes it easy to store and retrieve data in JSON documents.

•Express is a lightweight web application framework that provides a range of app-building tools and supports a variety of programming languages, including JavaScript.

•React is an open source, front-end JavaScript library for building user interfaces based on components.

•Node.js is a runtime environment that can be used to run JavaScript code on the server side. This allows developers to use the same language for both the front and back ends of their applications.

Development Tools (Example)

GitHub

TAIGA

Notion

Use Component Based Architecture

Resilient

- Meets current and future requirements
- Improves extensibility
- Enables reuse
- Encapsulates system dependencies

Component-based

- Reuse or customize components
- Evolve existing software incrementally

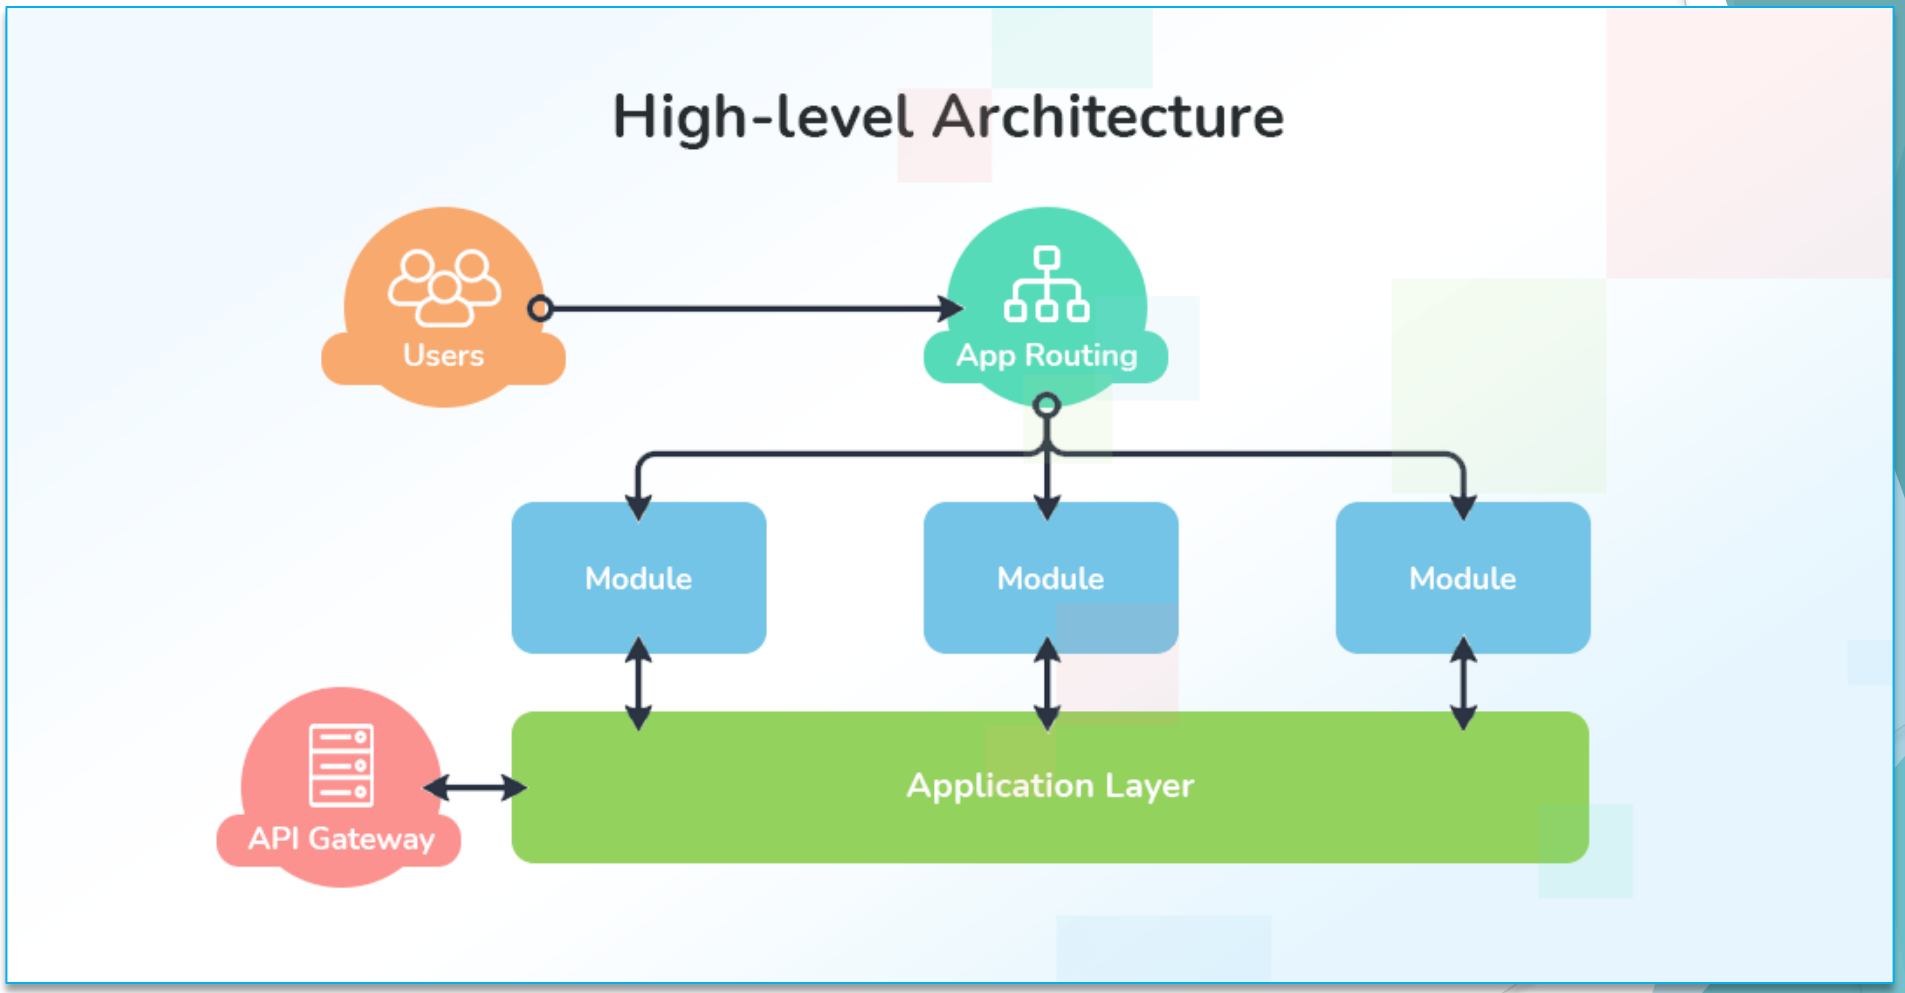

http://www.nyu.edu/classes/jcf/CSCI-GA.2440-001/slides/session1/SoftwareEngineeringFundamentals.pdf

Model Visually

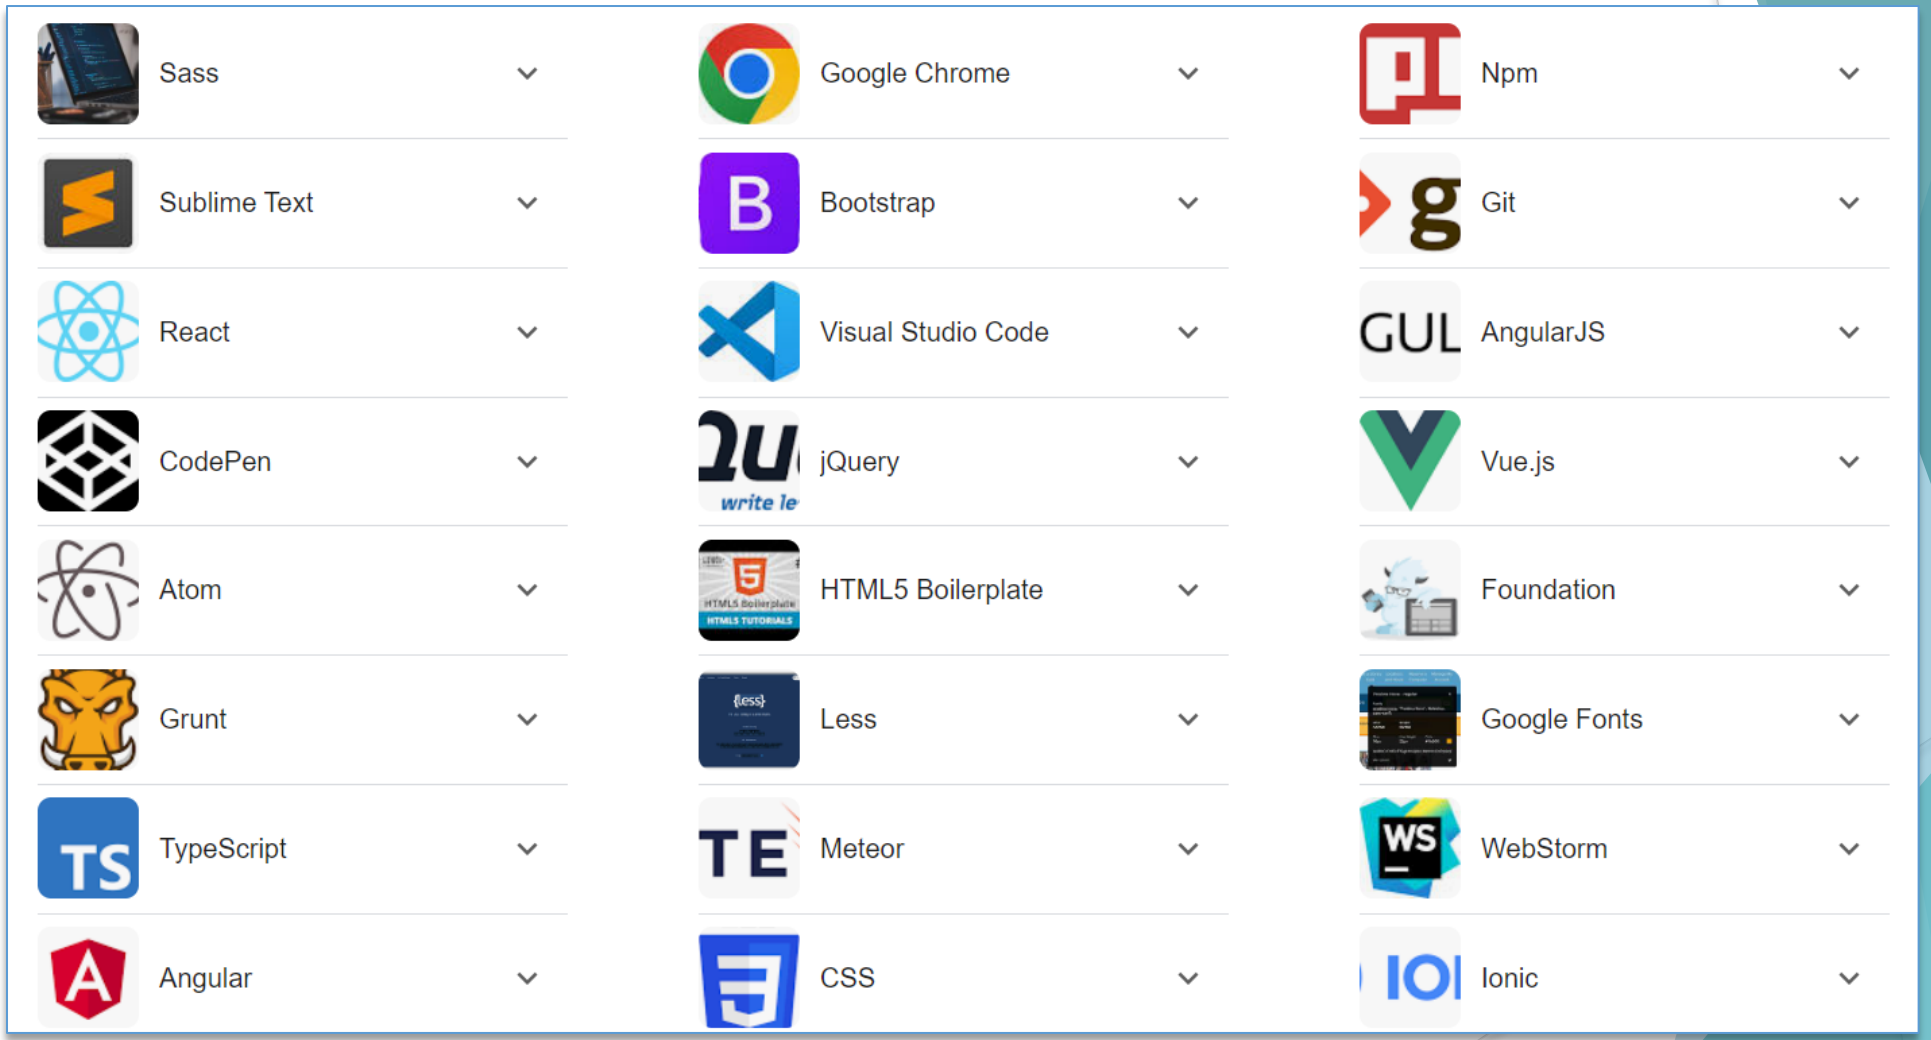

- Capture structure and behaviour
- Show how system elements fit together
- Keep design and implementation consistent
- Hide or expose details as appropriate
  Promote unambiguous communication

http://www.nyu.edu/classes/jcf/CSCI-GA.2440-001/slides/session1/SoftwareEngineeringFundamentals.pdf

Front End Architecture

Development Tools- Front End

Development Tools

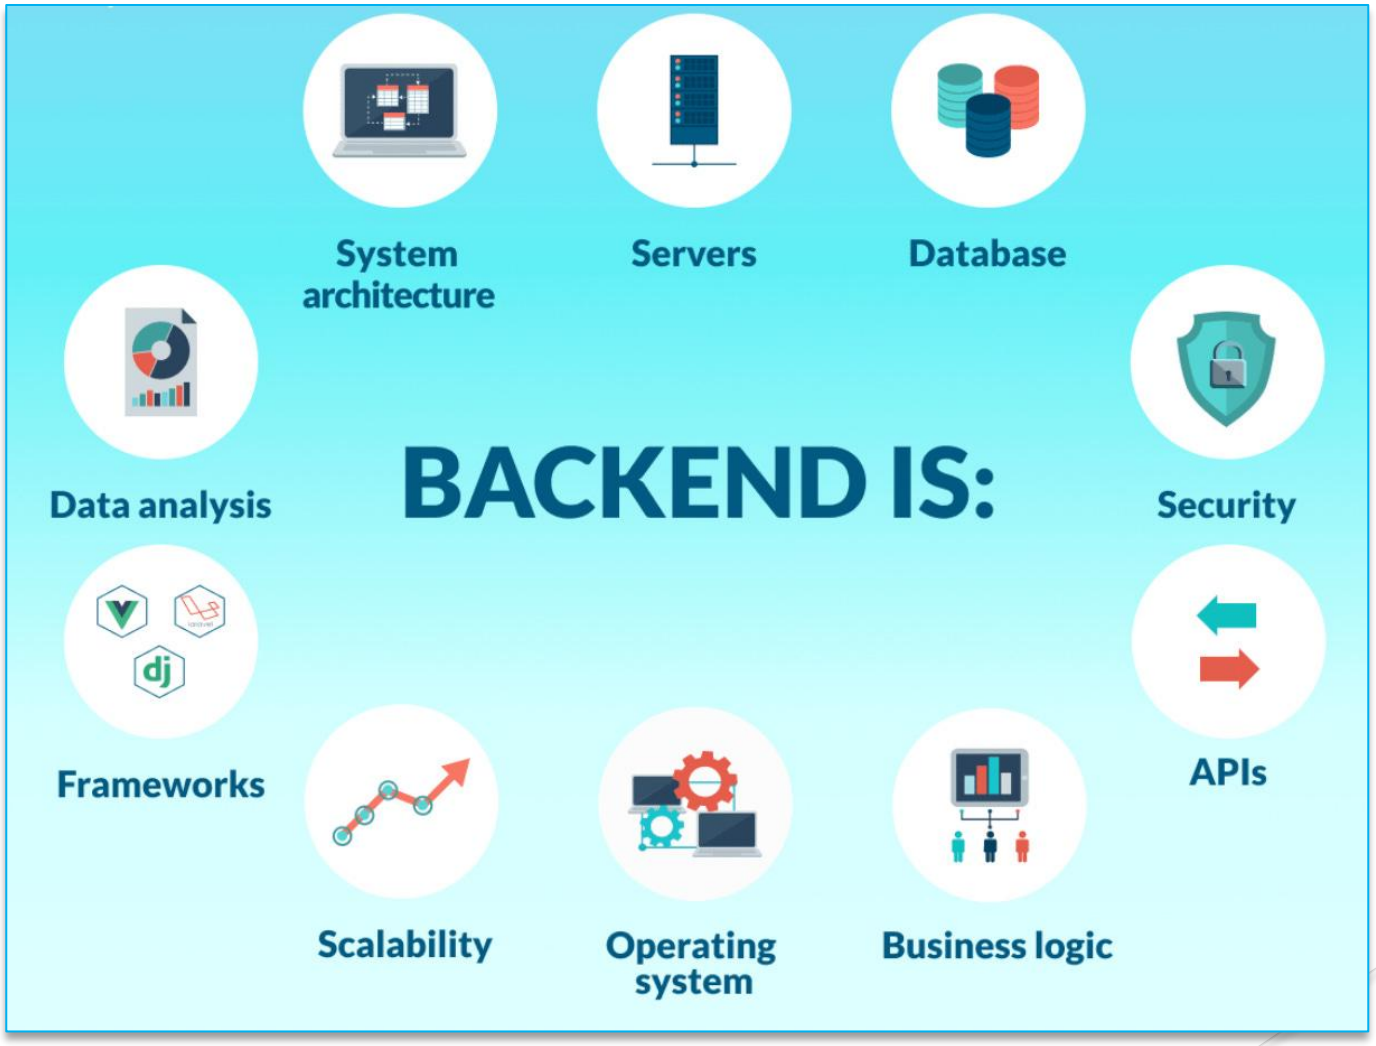

1.MJML: This is a framework designed to reduce the pain of coding a responsive email.
2.Angular: A platform and framework for building single-page client applications using HTML and TypeScript.
3.Bootstrap: A front-end framework for developing responsive and mobile-first websites.
4.D3.js: A JavaScript library for producing dynamic, interactive data visualizations in web browsers.
5.React: A JavaScript library for building user interfaces, maintained by Facebook.
6.Ionic: A complete open-source SDK for hybrid mobile app development.
7.Redux: A predictable state container for JavaScript apps, often used with React.
8.Vue.js: A progressive framework for building user interfaces.

9.Backbone.js: A JavaScript library with a RESTful JSON interface and is based on the model–view–presenter (MVP) application design paradigm.
10.TypeScript: A typed superset of JavaScript that compiles to plain JavaScript.
11.Flutter: An open-source UI software development kit created by Google for building natively compiled applications for mobile, web, and desktop from a single codebase.
12.Ember.js: An open-source JavaScript web framework, utilizing a component-service pattern.
13.Ext JS: A JavaScript framework for building data-intensive, cross-platform web and mobile applications.
14.Svelte: A new approach to building user interfaces, where the work typically done in the browser is shifted into a compile step.

Development Tools- Java Script Frameworks

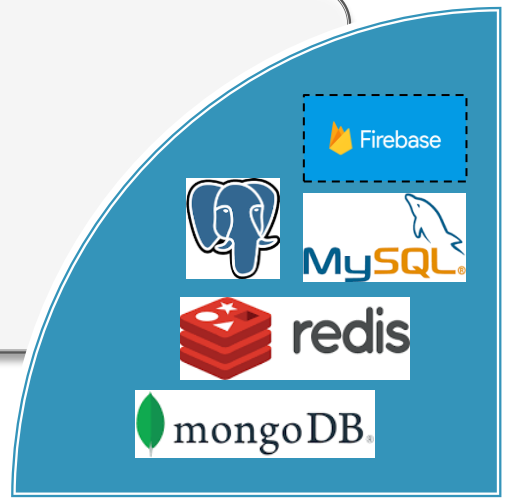

Back End Architecture

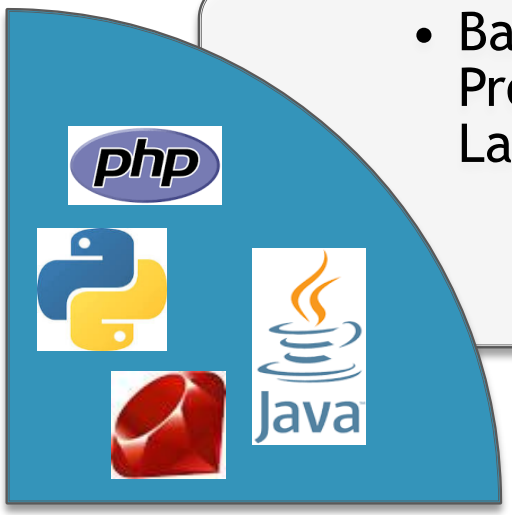

Components of Back End

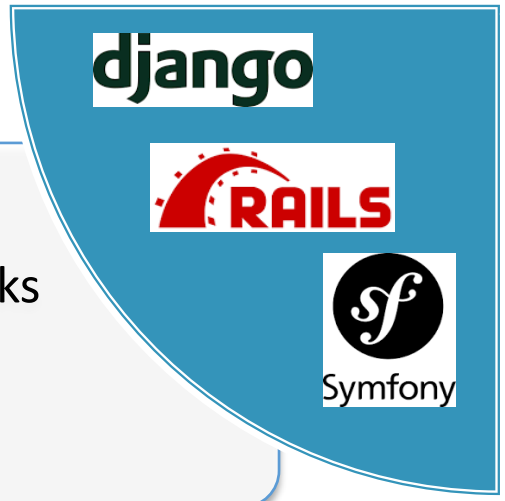

- DB

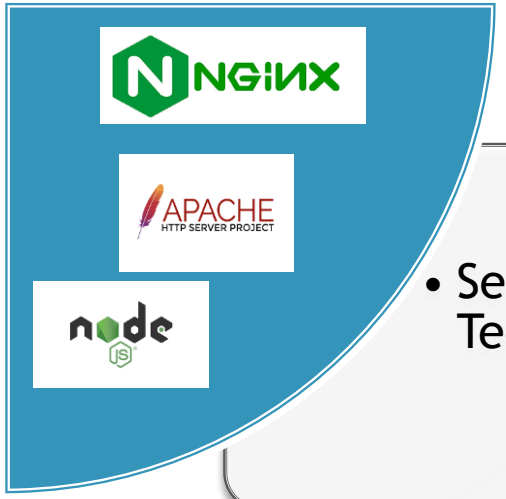

- Back End Prog. Language

- Frameworks

- Server Technology

Development Tools- Back End

What are the Different Components of Back-End Technology?

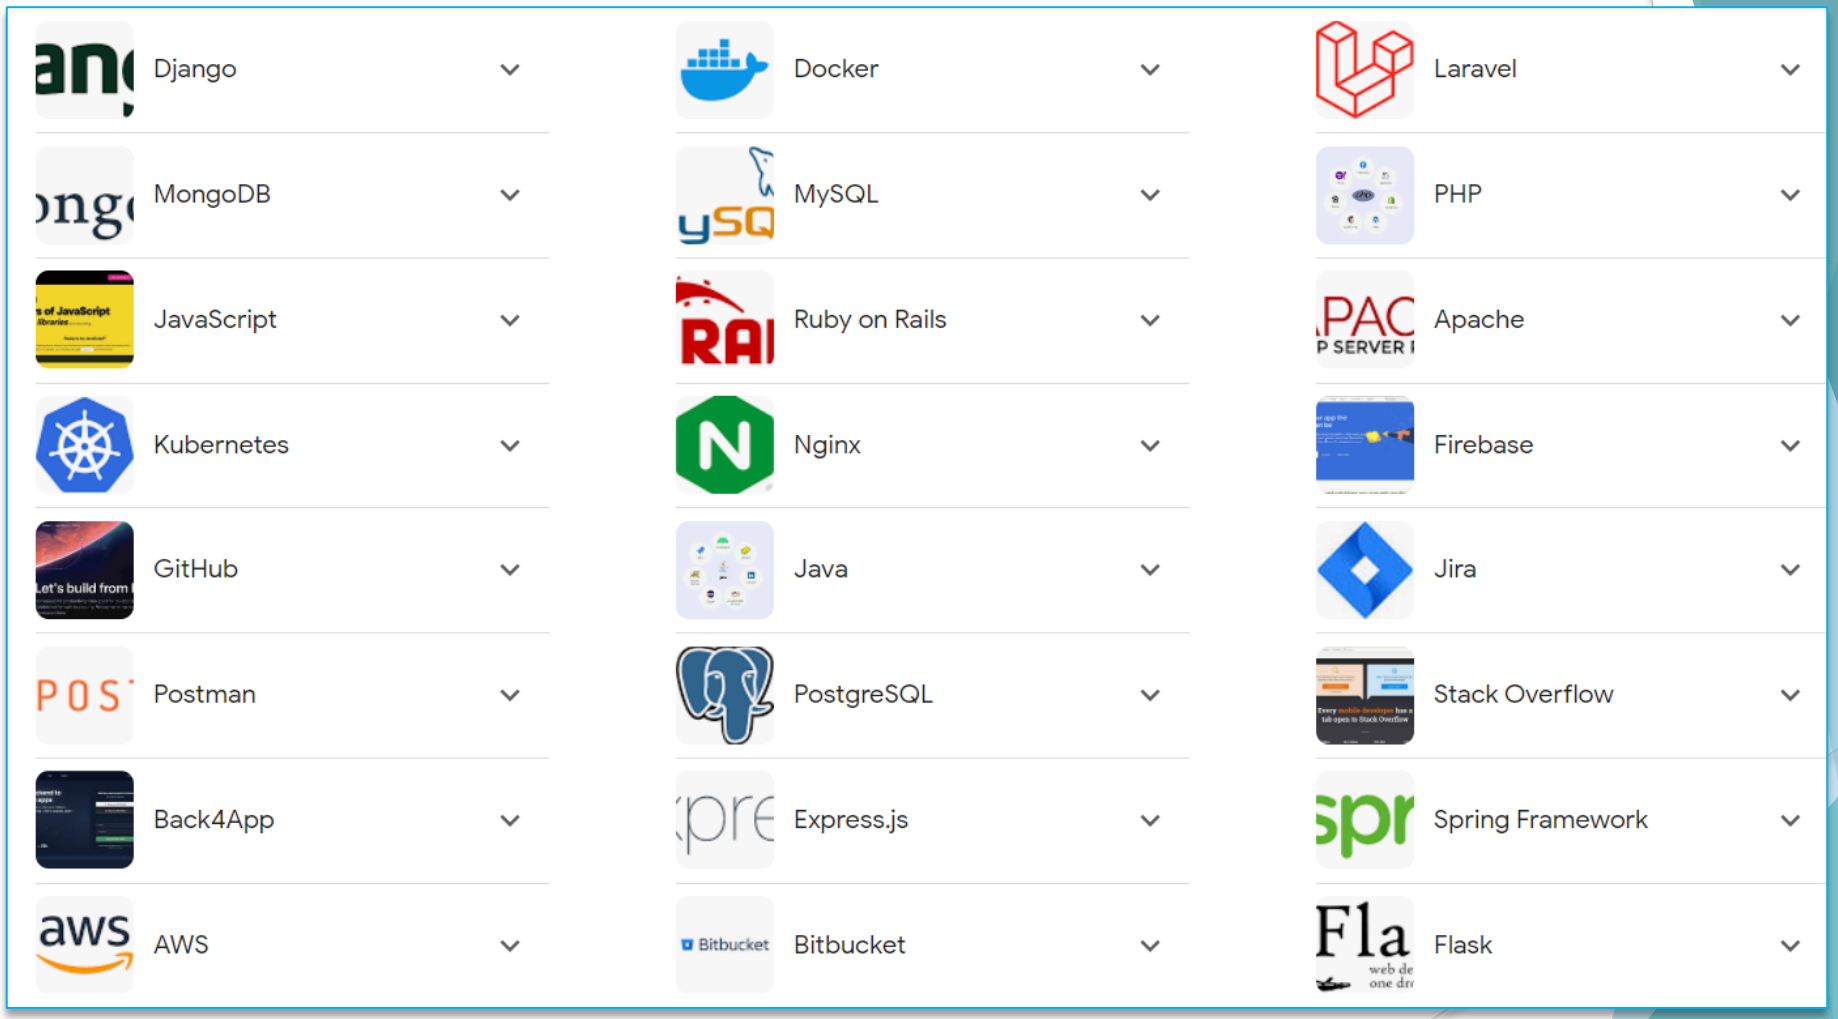

- **Database technologies**
- These are used to store and manage data, typically in a relational database. Popular choices include MySQL, PostgreSQL, MongoDB, and Redis.

- **Backend programming languages**
- These are the actual programming languages used to write code for web applications. Popular backend languages include PHP, Python, Java, and Ruby.

- **Frameworks**
- These provide an additional layer of organization and structure that makes development easier by providing common tools and functions for developers to use when writing their code. Commonly used frameworks include DJulygo (for Python), Rails (for Ruby), and Symfony (for PHP).

- **Server Technologies**
- These are the technologies used to host and run the application. The most common choices are Apache, Nginx, and Node.js.

Development Tools- Back End

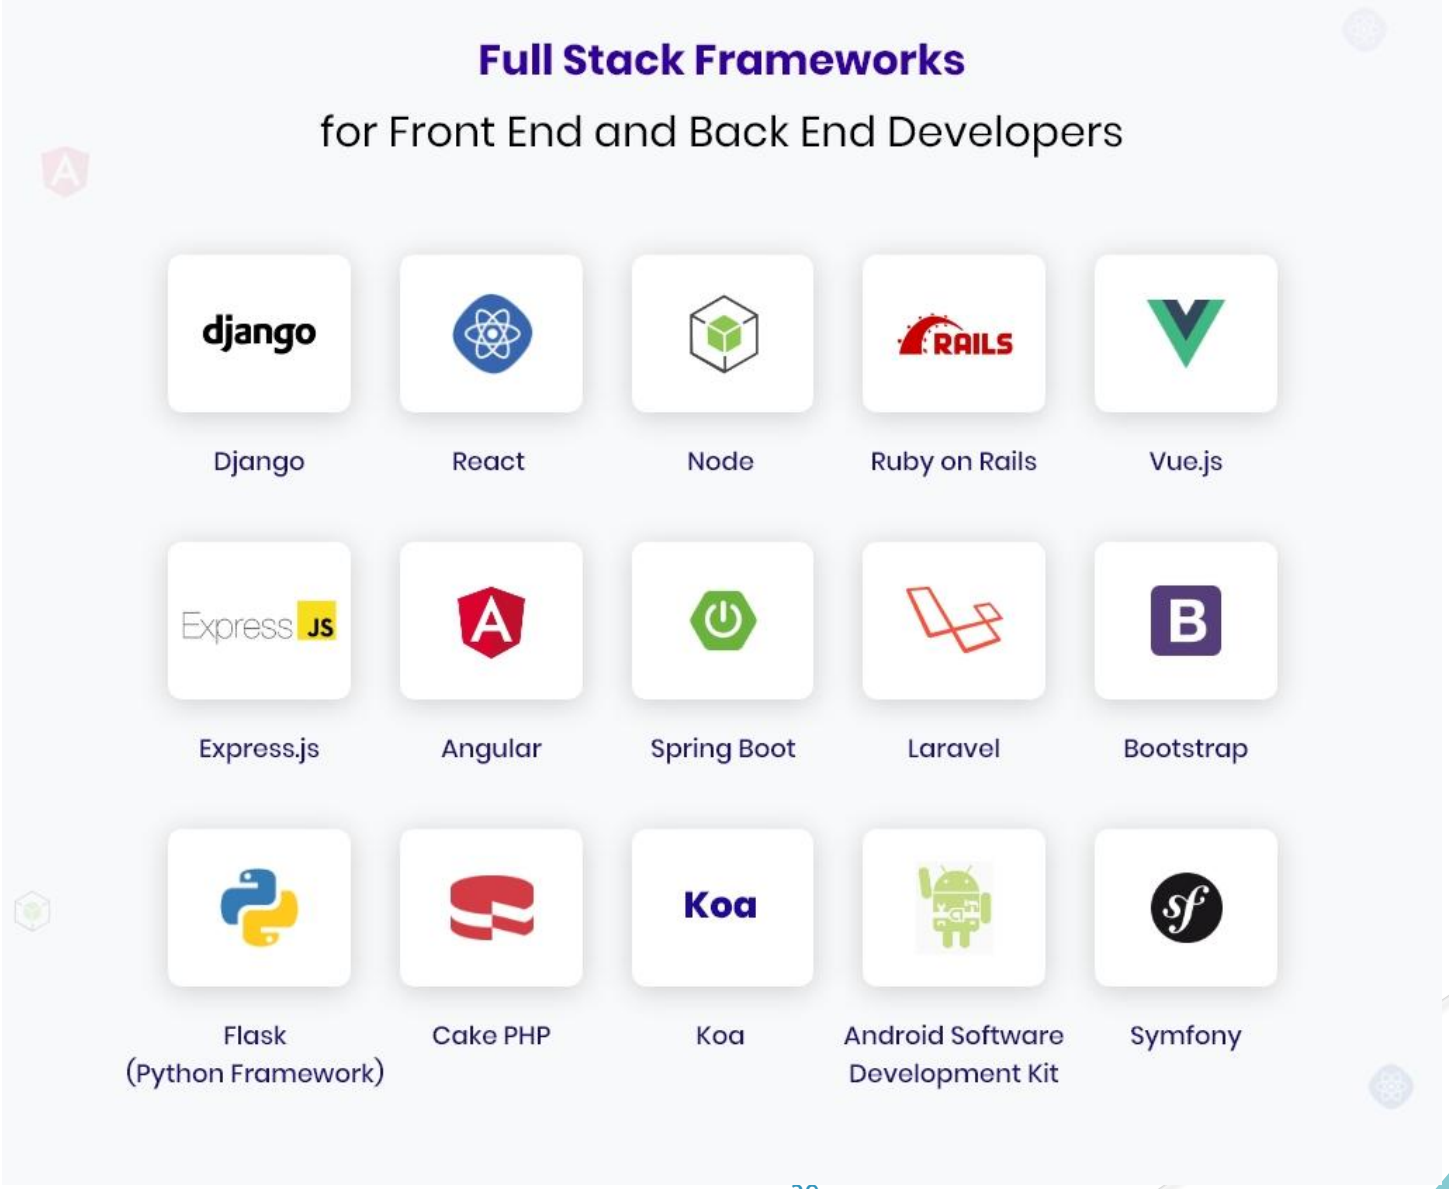

Development Tools- Back End

1.DJulygo: is a high-level Python web framework that encourages rapid development and clean, pragmatic design.
2.React: is a JavaScript library for building user interfaces.
3.Node.js: is a JavaScript runtime built on Chrome's V8 JavaScript engine.
4.Ruby on Rails: is a server-side web application framework written in Ruby.
5.Vue.js: is a progressive JavaScript framework used for building user interfaces.
6.Express.js: is a web application framework for Node.js, designed for building web applications and APIs.
7.Angular: is a platform and framework for building single-page client applications using HTML and TypeScript.
8.Spring Boot: is a project built on the Spring Framework, which simplifies the bootstrapping and development of new Spring applications.

Development Tools- Back End (Contin.)

9. **Laravel**: is a PHP web application framework with expressive, elegant syntax.
10. **Bootstrap**: is a free and open-source CSS framework directed at responsive, mobile-first front-end web development.
11. **Flask**: is a micro web framework written in Python.
12. **CakePHP**: is an open-source web framework that follows the model-view-controller (MVC) approach and is written in PHP.
13. **Koa**: is a new web framework designed by the team behind Express, which aims to be a smaller, more expressive, and more robust foundation for web applications and APIs.
14. **Android Software Development Kit (SDK)**: is a set of development tools used to develop applications for Android platform.
15. **Symfony**: is a Symfony is a PHP web application framework and a set of reusable PHP components/libraries.

Development Tools- Summary

FYP Projects and Tools

Convolutional Neural network (CNN)

Recurrent neural network (RNN)

Project management Tools

TAIGA

Free and open-source project management tool
For cross-functional agile teams to work effectively

Jira

Is an agile project management tool that supports any agile methodology, be it scrum, kanban, or your own unique flavor. From agile boards, backlogs, roadmaps, reports, to integrations and add-ons you can plan, track, and manage all your agile software development projects from a single tool.

Notion

Offers a clean and open surface for thinking, writing, and planning. Customization is key, allowing users to create pages and arrange them as needed. Collaboration is seamless, with the ability to share work, make comments, and mention colleagues.

CSIT321 – Project, 1nd FYP briefing

- What is FYP?
- Objective
- Learning Outcomes
- **Assessment & Deliverables**
- Who is who
- Role of a project supervisor
- Expectation from the project team
- Important time-line

Assessment

You are assessed based on **project activities** and the **quality** of the product.

- Your participation and contribution to the project as a team.
- Originality of your product.

Assessment 1- 19 Sept 2026

Assessment 2- 21 Nov 2026

All Team members are required to attend the both the assessments in person. Absent from the assessments without a valid reason may result in FAIL Grade.

Assessment

It is the responsibility of students to attend both lectures and Assessments.

Failure to do so may result in a TF or WH grade being assigned to students who do not comply.

Guideline for the assessment:

Assessment Items & Format	% Of Final Mark	Group/ Individual	Due Date	Subject Learning Outcomes	Criteria To Assess Item
Project requirements documentation	10%	Group	Week 5 2 August 2026	3-5, 7	Marking Rubric (Knowledge, Quality, Innovation)
Project progress report: **Preliminary Technical Documentation and Preliminary User Manual, Presentation Slides**	15%	Group	Week 10 12 Sept 2026	1-5, 7	Marking Rubric (Knowledge, Quality, Innovation)
Project progress presentation – Prototype demo (approx. 20mins)	10%	Group	Week 11 19 Sept 2026	1-5, 7	Marking Rubric (Knowledge, Quality, Innovation)
Final product and documentation: Functional Product **Final Technical Documentation, User Manual, Source Code, Peer Assessment, Project Video, Presentation Slides**	45%	Group	Week 19 14 Nov 2026	1-5, 7	Marking Rubric (Knowledge, Quality, Innovation)
Reflective diary (Submit Weekly)	5%	Individual	Week 19 14 Nov 2026	3,4,6,7	Level of Understanding
Final presentation **(approx. 30mins)**	15%	Group	Week 20 21 Nov 2026	1-5, 7	Marking Rubric (Knowledge, Quality, Innovation)
Final online submission of Documents to SIM		Group	25 Nov 2026		

Guideline for the assessment:

Note: The weightage shown above are intended mainly as a guide to assess the final result. Each student's final result will be evaluated on his or her **individual** efforts and contribution, including individual performance during the FYP presentation.

Using Generative Artificial Intelligence (GenAI)

GenAI technology (such as ChatGPT or Microsoft Co-pilot) is reshaping the University experience worldwide.

UOW is committed to embracing GenAI as a tool to enhance learning experiences and develop vital work-readiness skills.

However, misuse or use of GenAI in assessments where prohibited constitutes academic misconduct

Using Generative Artificial Intelligence (GenAI)

1. Generative AI is not a substitute for decision-making: GenAI should complement, not replace, your critical thinking and decision-making skills.

2. Output quality depends on prompts: The quality of GenAI output is influenced by prompting. Poorly constructed or unclear prompts may generate outputs that are incorrect.

3. Fact verification is essential: GenAI outputs can be fabricated, presenting inaccurate information or containing harmful bias. Verify all GenAI outputs against reliable sources.

4. Protect data and copyright: Many GenAI technologies collect information in ways that breach privacy and data protection provisions, particularly where the source material is confidential or subject to copyright. Please check the Terms and Conditions of GenAI technologies and if unsure, contact UOW Copyright Guidance. Learn more about how to access UOW secured GenAI tools here.

5. Transparency in use: Where required, you must acknowledge GenAI use, including providing prompt histories and detailing how GenAI was utilised.

6. Thoughtful and appropriate application: Be mindful of when and how to use GenAI tools. Assess its appropriateness for each use, and refrain from use when not suitable.

Assessment 1

Project Progress Report

- Preliminary Technical Documentation- A compilation of all the documents done in Session 1
- Preliminary User Manual- Describing the usage of Functional Prototype
- Peer Assessment form
- Presentation Slides

- **Functional Prototype**
  - A functional prototype with basic functionalities implemented and demonstrated in its intended platform (not wireframes)

- **Presentation Slides**

- **Peer Assessment for Session 1**

Sample Docs

Deliverables (Session 1 Assessment)

- **Preliminary Technical Document – A compilation of all three previous documents PRD, SRS and TDM**

- Your deliverables for this item include:
  - Update from the previous phase till the current date
    - In your progress report, you need to include the following:
      - Update changes if any in the Functionalities stated in PRD
      - Update Work Break Down Structure to reflect the latest functionalities

Deliverables (Session 1 Assessment)

- **Project progress report**
  - Your deliverables for this item include: (…continue)
    - Updated Systems Design Requirements
      - Detail your design decision and a process of systematic evaluation, validation as well as verification. You should detail the specification of your system with a clear view about what it is you are building and the approaches that you intend to take.

Deliverables (Session 1 Assessment)

- **Project progress report**

- Your deliverables for this item include: (…continue)
  - Systems Design Requirements (… continue)
    - You should include in your design specification the following:
      - Website designed to be used for external marketing of your project group and the system being developed

Deliverables (Session 1 Assessment)

- **Project progress report**

- Your deliverables for this item include: (…continue)
  - Preliminary User Manual
    - A user manual that describe how to use the prototype developed
    - Include Screen shots of various functionalities of the prototype with descriptions of usage

Deliverables (Session 1 Assessment)

- **Functional Prototype**
  - A functional product with limited functionalities
  - The product must be functional in its intended platform

- **Peer Assessment form** - Duly filled with contribution percentage from each member
- **Presentation Slides**

Final Assessment

- **Final Product- Fully Integrated, Functional and Tested in the intended platform**
- **Documentation- Consists of**
  - **Source code**
  - **User manual**
  - **Final Technical Document**
  - **Testing documentation**
  - **Final website (for marketing purposes)**
  - **Product Video**
  - **Peer Assessment**
  - **Presentation Slides**

Deliverables (Final Assessment)

- **Final Product, Documentation, and Presentation (Group)**
  Source code, including executable and documentation (user manual)
  - Final Product
    - A fully functional Final Product with all its functionalities implemented
    - Must be demonstrated live on the intended platform
    - Local host demonstration for web based application are NOT allowed
    - Mobile Applications must be demonstrated on a mobile device and not on an emulator

Deliverables (Final Assessment)

- **Final Product, Documentation, and Presentation (Group)** Source code, including executable and documentation (user manual)
  - User manual
    - Hardware/software requirement
    - Installation guide (if any)
    - Clear, unambiguous instructions

Deliverables (Final Assessment)

iii. Final Technical Document

- Requirement Specification (final version)
- Design Specification (final version)
  - Architecture Design
  - Database Design (if any)
  - Software Design
- Testing Documentation (final version)
  - Test Plan
  - Test Cases and the respective Test Logs.

Deliverables (Final Assessment)

iv. Final project Website (for marketing purposes).

- Note: if you host your website on a paid domain, make sure you have the website active (available) for at least one month after your FYP presentation.

v. A video recording of the entire product functionalities.

vi. Marketing video- 2-3 min video demonstrating key features of the project

Deliverables (Final Assessment)

4. **Reflective diary - Individual**
   - Recording of individual's activities related to the final year project which includes and not limited to your individual inputs, contribution and efforts in any form leading towards the completion of the final product.
   - The entries must be completed on a **weekly** basis.

Deliverables (Final Assessment)

5. **Peer assessment and group contribution statement - Group**
   - Evaluation of individual member on fellow group members' contribution.
   - This peer evaluation will be considered by the supervisor and assessor to determine the final mark for participation and contribution of individual member for the project.

Deliverables (Final Assessment)

- All deliverables, **except for the Final Product**, must be submitted through UOW Moodle using the submission link created for each deliverable by due date.
- For the Final Product, please do the following:
  i. Submit the following three items through UOW Moodle using the submission link created.
     - Final Technical Docs
     - Final User Manual
     - Peer assessment and group contribution statement.

Deliverables (Final Assessment)

- For the Final Product, please do the following: (… continue)
  ii. Upload **ALL** your Final Product (including Technical Manual, User Manual, Peer assessment and group contribution statement) to a cloud storage and email the link to your project assessor, supervisor and Mr. Bernard Si (Bernardsin@sim.edu.sg) for processing

What are expected for your assessment?

Final Product, Documentation, and presentation

- All documentation should be submitted to the Assessor and your supervisor/client. Executable and binaries need to be provided, along with the documentation (this can be submitted as link to a shared folder if the file exceed the space on UOW Moodle.)
- **ALL** group members **MUST** contribute a reasonable amount, determined by the group's supervisor, to the implementation. i.e., code of the project and/or documentation. Failure to do so may result in a TF or WH grade being assigned to students who do not comply.

CSIT321 – Project, 1nd FYP briefing

- What is FYP?

CSIT321 – Project, 1nd FYP briefing

- What is FYP?
- Objective
- Assessment & Deliverables
- Who is who
- **Role of a project supervisor**
- Expectation from the project team
- Important time-line

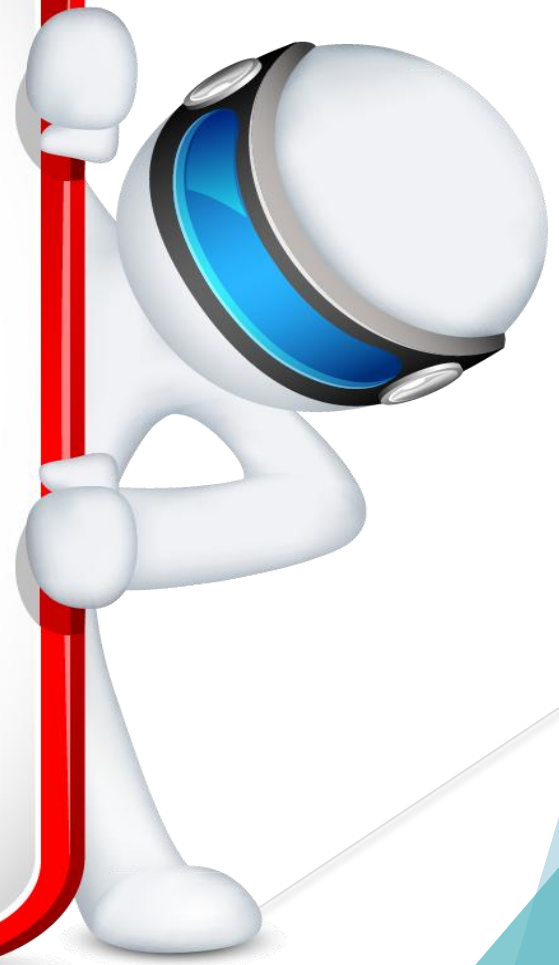

Role of Project Supervisor

- Supervisor will be playing the role of a **facilitator**; they are **not** the Project Manager of your group.
- The implementation and coming out of solution for the project is **NOT** the responsibility of the supervisor.
- The supervisor may, to some extend, provide input to the implementation of the project.
- At the end of the day, the project supervisors and project assessor are the person who will assess you.

CSIT321 – Project, 1nd FYP briefing

- What is FYP?
- Objective
- Assessment & Deliverables
- Who is who
- Role of a project supervisor
- **Expectation from the project team**
- Important time-line

Expectation from the team

- Organize the group and appoint a group leader who will lead the group and establish communication with project supervisor.
- All communication with project stakeholders as well as project deliverables must be identified with your **Project Group ID**; e.g., **FYP-26-S3-01-PRD**.
- Teamwork is important, everyone plays an important role in the team.
- No free loader, please. All team members are assessed individually
- Every team member is expected to contribute to the project, and workload should be equitable.

Expectation from the team

- Schedule a weekly progress meeting among the team members and minute all your progress meeting.
- Arrange to meet with your project supervisor regularly- bi weekly, and keep your project supervisor updated on the progress of the project.
- When a problem occurs within the group you should talk with your supervisor immediately.

CSIT321 – Project, 1nd FYP briefing

- What is FYP?
- Objective
- Assessment & Deliverables
- Who is who
- Role of a project supervisor
- Expectation from the project team
- **Important time-line**

To be completed in week 1 to week 11

To be completed in week 12 to week 20

	Week	Activities
FYP First Lecture Receive Project Plan From Supervisor	Week 1	Form Team, Create Project Web Site Literature Review and Research
	Week 2-5	Requirement Analysis Requirement Elicitation Identify Key Functionalities, Create Work Break Down Structure WBS Selection of Development Tools Selection of Development Methodology
	Week 5	Submit Project Requirement Documentation
	Week 6-11	Requirement Specification Technical Design manual Wireframes Design Review Functional Prototype Development Session 1 Assessment Documents (Preliminary Technical Documentation and Preliminary User Manual
Session 1 Assessment and FYP Second Lecture	Week 10/12	Submit Session 1 Assessment Documents Demonstrate Functional Prototype to Assessor All team members must attend
	Week 12-16	Develop Individual Modules and Test Create Databases and host it Create Test plan for Unit and Integration Testing Update Project Documents
	Week 16-18	Integrate all modules in to final product Carry out Integration Testing Generate Test reports Prepare Final Assessment Documents
	Week 19	Submit final Documentation including , Source Code, Presentation Slides, Project Video, Final Technical Documentation, Final User Manual, Peer Assessment and Final Product
Final assessment	Week 20	Final Project Presentation, Demonstrate fully functional product in its intended platform. All members must attend the Assessment

Thank You
